Aims and Scope of *Location Science*

The primary focus of this journal is on research directed to extending and applying the theory and modeling of location decisions. The journal will also publish papers which address the underlying processes related to locational decisions, the determination of parameters associated with location problems, and issues of implementation. The submission of papers which apply locational constructs to non-locational problems is encouraged. In addition, the journal will occasionally publish articles reporting on specific applications of location modeling, as well as invited literature reviews and perspectives. These latter articles will include, but not be limited to, recommendations for future research, analysis of failures in past research, and historical overviews.

Due to the complexity, strategic importance, and widespread application of location analysis, it has attracted the interest of researchers from many academic disciplines. These include economics, engineering, geography, logistics, marketing, mathematics, management information systems, operations research, regional science, and planning, among others. It is intended that the journal will be representative of the various academic disciplines involved in location analysis. An important goal of the journal is to encourage inter-disciplinary communication and research. Consequently, authors should write their papers in a style which is accessible to interested readers from disciplines other than their own. This is not to imply that rigor should be sacrificed, but rather, that authors should take the time (and words) to explain their findings in a manner which is understandable to researchers in allied disciplines.

Volume 1 Contents

1993

NUMBER 1

- | | | |
|--|-----|---|
| Richard L. Church,
John R. Current and H. A. Eiselt | 1 | Editorial |
| George O. Wesolowsky | 5 | The Weber problem: history and perspectives |
| David A. Schilling,
Vaidyanathan Jayaraman and
Reza Barkhi | 25 | A review of covering problems in facility location |
| Roberto Diéguez Galvao | 57 | The use of Lagrangean Relaxation in the solution of
uncapacitated facility location problems |
| Avijit Ghosh and Farid Harche | 81 | Location-allocation models in the private sector:
progress, problems, and prospects |
| | 107 | Abstracts in location analysis |

NUMBER 2

- | | | |
|---|-----|---|
| Francois V. Louveaux | 127 | <i>Invited Review</i> - Stochastic location analysis |
| M. John Hodgson and
Susan Neuman | 155 | A GIS approach to eliminating source C aggregation
error in p -median models |
| Rex K. Kincaid and
Lynne G. Yellin | 171 | The discrete p -dispersion-sum problem: results on
trees and graphs |
| H. A. Eiselt, Michael Gendreau
and Gilbert Laporte | 187 | Maximizing pedestrian flow in shopping center
layout |

NUMBER 3

- | | | |
|--|-----|---|
| Erhan Erkut | 199 | Inequality measures for location problems |
| Rex K. Kincaid and
Rosemary T. Berger | 219 | The damper placement problem on space truss
structures |

In Chan Choi and
Sohail S. Chaudhry

235 The p -median problem with maximum distance
constraints: a direct approach

245 Abstracts in location analysis

NUMBER 4

Dilip Chhajed,
Richard L. Francis and
Timothy J. Lowe

263 *Invited Review* - Contributions of operations research
to location analysis

Margaret L. Brandeau and
Samuel S. Chiu

289 Sequential location and allocation: worst case
performance and statistical estimation

Daniel Serra de la Figuera and
Charles Revelle

299 The pq -median problem: location and districting of
hierarchical facilities

331 Abstracts in location analysis
